

Refrigerant Hoses With Safe Care Fitting

Easy to connect

With the newly designed knobs on the fittings, it will be very easy to screw the fittings onto any system.

Swivel freely

The design of the fittings enables the hoses to swivel 360 degrees freely.

Fittings Stay Tightly connected

The swivel design also makes sure that the fittings will not come loose from the system when the hoses are twisted during operation

Easy to disconnect

When the hoses are connected to the system and with pressure in the system are higher with the new gas, it is very difficult to disconnect the fittings under high pressure. With the newly designed knobs on the fittings, it is very easy to disconnect. Also, because the knobs make disconnecting easier; therefore, there are less Freon lost during the disconnection process.

No More Finger Burn

When disconnecting fittings from the system, Freon will come out of hose connector. In this situation, freezing Freon usually causes fingers to burn. With the newly designed fittings, the position where users place their fingers is far from where the Freon leaks. Therefore, no more finger burns.

Hose Capacity:

Working Pressure: 800 Psi (55 BAR)
 Bursting Pressure: 4000 Psi (275 BAR)
 Freon: All Refrigerants Including R134A, R290A, R32, R410A
