

CCLBV-72 - SET OF KOBRA HIGH PRESSURE HOSES

Category:
HOSES

Sub Category:
KOBRA HOSE BALL VALVE ENDS

Set of three 72" (182 cm) CLB Series of Kobra® High Pressure Hoses.

CLBV Series hoses feature a ball valve fitting at the end that opens to full flow. Our patent pending design of the fittings features a hood that locks the gasket into the fitting with a straight edge to straight edge force that eliminates the blowout of the gasket. The barbed depressor locks into the gasket, exerting more outward force and pushing the gasket further into place. This depressor is precisely machined for maximum flow and has a dimple that guides the valve core into place. Kobra® high pressure hoses are made from Kevlar® - the same material that stops bullets in bullet-proof vests. Kevlar® makes our hoses strong and flexible, while the nitrile cover extends the life of the hoses better than neoprene. Kobra® hoses are made in the USA.

CLBV Features:

- 800 psi working, 4,000 psi burst
- 5 to 1 safety factor (beats industry standard of 4 to 1)
- 1/4 turn lever style ball valve at one end
- Made out of Kevlar®
- Use rebuild kit 90514
- Use P511 replacement gasket
- Use P90514 replacement depressor
- Made in the USA
