The new ArmaFlex SE - Improved fire protection

Dear Business Partner

Improved fire protection in buildings is essential to protect the lives of occupants as well as your valuable assets.

As the world's leading provider of innovative engineered insulation solutions and components, Armacell is launching **ArmaFlex SE**, a new flexible, closed-cell rubber solution that provides **enhanced fire protection**.

The launch of ArmaFlex SE replaces our existing products ArmaFlex LS and ArmaFlex XG.

Compared to ArmaFlex XG, ArmaFlex SE is the improved, economical insulation solution that meets **smoke class s2** (improvement from s3). This critically increases the building material class from **RF2 (cr)** to **RF2**.

Both tubes and sheets are available. The product complies with European regulations as well as national certifications such as **DGNB** (Germany) and **LEED**.

The new insulation material is ideal for **air duct, cooling and air conditioning** applications and can be easily used in commercial, residential, office, public and industrial buildings.

The launch of ArmaFlex SE is scheduled for end of September 2023.
